

## SERIES 320

Spring anti-vibration support for supporting machines with a working speed above 400r.p.m. and auxiliary audiovisual equipment.

9 models available with load capacities from 420 to 1,750 kg.

### Advantages offered by the materials:

- Good resistance to U.V. rays.
- Good resistance to ozone.
- High corrosion resistance finishes.
- High performance in low and medium frequencies.
- Maximum durability in its performance.

### Advantages offered by the design:

- Easy installation and assembly.
- Good stability.
- Very High Isolation for Low Frequencies.
- The series supports a wide range of loads.

### Features:

- Vertical resonance frequency:  
3-4 Hz.
- Maximum admissible excitation amplitude:  
 $\pm 1$ mm.
- Maximum elastic limit: at an acceleration of 1g vertically and 0.5g laterally.

### Applications:

- Isolation of machines with rotations > 400 r.p.m.
- Compressors.
- Fans.
- Engines.
- Electrical cabinets.
- Laboratory machines.
- Ducts.
- Pipes.
- Auxiliary audiovisual equipment.
